

Product Name: KAY AI FASHION ASSISTANT

Problem

ABOUT YOU Chat support KAY currently supports customer-service needs, but does not extend into conversational fashion discovery and product recommendations.

Shoppers use filters to find the products they want to buy.

What is our SOLUTION?

Evolve existing “KAY” support to “AI FASHION ASSISTANT”!!

Understand the shopper's intent + preferences + context and recommend relevant, shoppable products directly within the ABOUT YOU experience.

Who is KAY for?

Name : Lea

Age: 18-35

Young Mobile Fashion shopper who knows roughly what she wants or needs inspiration

Goal

Find Suitable Fashion products quickly and confidently.

Pain Points

Too much manual searching, filtering and comparing to translate a shopping need into the right product.

JTBD

When I know roughly what I need, I want to describe it naturally and receive relevant recommendations, so I can find suitable products with less efforts.

User Research

From our research, we identified two important shopping moments:

- “I know roughly what I want” - “I need beige trousers for a summer party”
- “ I need guidance” - “Help me find something for a date”

User need

“I already have a conversational entry point with KAY - what if it could also help me discover products?”

Competitive Landscape

- Amazon Rufus
- Daydream
- Alta
- Stitch fix
- Google Shopping AI
- Linya
- Style DNA
- Whering
- Acloset
- Indyx

KEY TAKEAWAY

KAY (Future) uniquely combines trusted support with advanced conversational fashion discovery, personalization and seamless shopping – all within the ABOUT YOU ecosystem.

Industry Trends

- Industry research shows the market is moving toward conversational discovery. Gartner reports 85% of enterprises are implementing conversational AI.
- McKinsey shows 71% of consumers expect personalized shopping experiences

KAY OPPORTUNITY

Expand KAY from customer support into support + conversational fashion discovery.

USER JOURNEY

Epics

- E1: Conversational Shopping Entry
- E2: Intent & Context Understanding
- E3: Product Catalogue & Availability
- E4: Product Recommendations
- E5: Conversational Refinement & Context Retention
- E6: FashionE1: Conversational Shopping Entry
- E7: Product Discovery to Purchase
- E8: Advanced Recommendations & Comparison
- E9: Image & Multimodal Discovery
- E10: Shopping Experience Integrations
- E11: Personalization & Style Profile
- E12: Advanced Multimodal Interaction
- E13: Advanced Personalized Recommendations

KAY AI Fashion Assistant — Story Map

User Journey: Ask → Understand → Recommend → Explain → Refine → View Product → Add to Bag

USER JOURNEY ACTIVITY	 ASK Shopper starts the conversation	 UNDERSTAND KAY understands the shopper's intent and context	 RECOMMEND Surface the right products from ABOUT YOU	 EXPLAIN Help the shopper understand why it matches	 REFINE Iterate toward the right pick	 VIEW PRODUCT Inspect an individual item in detail	 ADD TO BAG / CONTINUE Convert & continue the journey
 PHASE 1 MVP (Now) Core conversational shopping journey Validate the end-to-end journey and purchase through existing ABOUT YOU checkout.	E1 — Conversational Shopping Entry - Start conversation with suggested prompts - Enter a shopping request using free-text chat	E2 — Intent & Context Understanding - Understand shopping intent, preferences and constraints - Ask smart clarification when needed - Use or override basic shopper preferences when available	E3 — Product Catalogue & Availability - Connect to the ABOUT YOU product catalogue - Access live product pricing and availability E4 — Product Recommendations - Recommend relevant real products - Display visual, clickable product cards	E4 — Product Recommendations (continued) - Explain why each product matches the shopper's needs E6 — Fashion & Occasion Guidance - Provide simple fashion and styling guidance - Recommend products based on occasion and practical needs	E5 — Conversational Refinement & Context Retention - Refine recommendations conversationally - Retain relevant context during the active conversation	E7 — Product Discovery to Purchase View recommended product details	E7 — Product Discovery to Purchase - Add selected product to Bag - Return to KAY without losing the active conversation
 PHASE 2 NEXT Enhance the shopping experience Improve quality, add new capabilities and expand validated experience.		E9 — Image & Multimodal Discovery - Discover products using an uploaded image E9 — Image & Multimodal Discovery - Use image and text together for basic multimodal styling	E8 — Advanced Recommendations & Comparison - Improve recommendation ranking - Compare recommended products - Recommend advanced outfits and complementary products	E8 — Advanced Recommendations & Comparison Compare recommended products	E10 — Shopping Experience Integrations Integrate Body Scan	E10 — Shopping Experience Integrations Integrate Virtual Try-On	E10 — Shopping Experience Integrations Integrate with ABOUT YOU account capabilities
 PHASE 3 LATER Personalize & scale Introduce personalization and advanced interaction capabilities.	E12 — Advanced Multimodal Interaction Interact with KAY using voice	E11 — Persistent Personalization & Style Profile - Save and manage style preferences with consent - Access conversation history - Learn from interactions across sessions - Build an evolving personal style profile	E12 — Advanced Multimodal Interaction - Provide advanced multimodal styling E13 — Advanced Personalized Recommendations - Provide advanced personalized recommendation ranking

ROADMAP

ROADMAP & LAUNCH PLAN

Core Journey Across All Phases: Ask → Understand → Recommend → Explain → Refine → View Product → Add to Bag

Indicative timeline —
subject to technical discovery,
integration complexity and
validation outcomes.

PHASE 1

0–6+ Weeks

MVP: Conversational Fashion Discovery

- E1 Conversational Shopping Entry
- E2 Intent & Context Understanding
- E3 Product Catalogue & Availability
- E4 Product Recommendations
- E5 Conversational Refinement & Context Retention
- E6 Fashion & Occasion Guidance
- E7 Product Discovery to Purchase

Launch: Prototype → MVP → ~1%
Closed Beta

1

Validation Focus

Can shoppers move from a natural-language fashion need to a relevant recommendation, add it to Bag, and ultimately purchase through the existing ABOUT YOU checkout journey?

PHASE 2

Months 2–4

Enhanced Shopping Experience

- E8 Advanced Recommendations & Comparison
- E9 Image & Multimodal Discovery
- E10 Shopping Experience Integrations

Launch: ~1% → 5–10%
Expand after successful
Closed Beta validation

2

Validation Focus

Does KAY maintain or improve recommendation quality and shopping outcomes as capabilities and user exposure increase?

PHASE 3

Months 4–8+

Personalized Fashion Assistant

- E11 Personalization & Style Profile
- E12 Advanced Multimodal Interaction
- E13 Advanced Personalized Recommendations

Launch: ~25% → ~50% →
Broader Rollout

3

Validation Focus

Can KAY scale while delivering increasingly relevant and personalized fashion assistance without compromising trust, privacy, recommendation quality or reliability?

Success Metrics

Purchase Rate of recommended product

Secondary

80%

users rate recommendations as helpful (CSAT)

EXPONENTIAL

KAY TECHNICAL ARCHITECTURE - Phase 1

1 PHASE 1 (MVP - Week 6): CONVERSATIONAL DISCOVERY

WHAT WE BUILD:
7 Epics (E1-E7):
Conversational shopping experience

KEY CAPABILITY:
User describes naturally → AI understands → Search 750K products → Rank by relevance → Display with explanations → Purchase

- TECHNOLOGY STACK:**
- Frontend:** React + TypeScript (UI, chat, product cards)
 - Backend:** Node.js + TypeScript (API, routing, context)
 - AI:** LLM (GPT-4 or Claude) → Intent understanding → Fashion guidance → Explanations
 - Search:** PostgreSQL (full-text search on 750K products)
 - Ranking:** Rule-based algorithm (Relevance + Quality + Pop)
 - Database:** PostgreSQL (products, conversations, context)
 - Integration:** About You APIs (product data, pricing, checkout)
 - Cloud:** Google Cloud Platform (Cloud Run, Cloud SQL)
 - Analytics:** BigQuery (track metrics)

KAY TECHNICAL ARCHITECTURE - Phase 2

2 PHASE 2 (Months 2-4): ENHANCED WITH ML + IMAGE DISCOVERY

WHAT WE ADD:
3 Epics (E8-E10):
ML ranking, image discovery, integrations

KEY CAPABILITY:
Phase 1 + Upload photo → AI analyzes → Find similar products + ML learns from behavior → Smarter rankings over time + Body Scan/VTO integration → Better fit predictions

NEW TECHNOLOGIES:

- Machine Learning:** XGBoost / LightGBM (learn from user behavior)
- Computer Vision:** CNN (ResNet-50) → Analyze uploaded images
- Embeddings:** CLIP model → Convert images to vectors
- Vector Database:** Pinecone / Weaviate (image similarity search)
- Integrations:** Body Scan API, Virtual Try-On API

STILL USES:

React | Node.js | LLM | PostgreSQL | About You APIs | GCP

CALCULATI

EXPONENTIAL

KAY TECHNICAL ARCHITECTURE - Phase 3

3 PHASE 3 (Months 4-8+): PERSONALIZATION + VOICE

WHAT WE ADD:

3 Epics (E11-E13):
User profiles, voice, demand forecasting

Learn user style
over time

Voice interaction
(hands-free)

Predict needs
(proactive)

Personal AI stylist
knows you best

KEY CAPABILITY:

Phase 1 + 2 + Learns individual user style over time
+ Voice interaction (hands-free) + Predicts what user
will need next (proactive) + Personal AI stylist that
knows user better than they know themselves

NEW TECHNOLOGIES:

Personalization: Collaborative Filtering (learn user taste)

Voice: Whisper API (speech → text)

Forecasting: Time-series ML (Prophet/LSTM) (predict needs)

Advanced ML: Neural Networks (personalized ranking)

Notifications: Push service (proactive recommendations)

STILL USES:

React

Node.js

LLM

PostgreSQL

Vector DB

About You APIs

GCP

BigQuery

TECHNOLOGY EVOLUTION

Phase 1: LLM + Search

(Core foundation)

Phase 2: + ML + Computer Vision

(Smart learning)

Phase 3: + Personalization + Voice

(AI Stylist)

Tech Stack Summary

MVP (Phase 1):

- Conversational AI
- LLM (GPT-4 or Claude) for intent extraction
- About YOU Product API Integration
- PostgreSQL Search & Ranking algorithm
- Integrated into About You

Phase 2:

- **XGBoost Machine learning** for recommendation ranking
- Computer vision for **image recognition (CNN)**
- Vector database for similarity search

Phase 3:

- Advanced **personalization ML**
- **Voice** interaction- Speech to text (whisper API)

Prototype
